

My super hero

«In the bathroom it is always waiting for me.
My laser sword with which
I can defeat all aliens from the planet "Carius".
My dad told me that!»

Julian,
(World Explorer)

paro[®] children's toothbrushes

The **paro[®]** children's toothbrushes are specially designed for our youngest: A small, round brush head and perfectly rounded bristles ensure efficient and gentle dental cleaning. Thanks to the ergonomic and longer grip parents facilitate the subsequent cleaning.

paro[®] junior

The small and special rounded brush head mean that even those hard-to-reach places are now accessible. The rounded, bristles clean teeth gently, protecting against gum problems. An ergonomic grip made from non-slip material, as well as a thumb rest, to facilitate handling. The elastic element in the brush neck prevents from too high pressure.

paro[®] S27 / M27

The classical children's toothbrush. The exclusive **paro[®]** *isola* F-tips (see page 10_11) can be attached to the **paro[®]** S27 / M27 toothbrush handle. With only one instrument, the entire dentition can be cleaned and the gingiva massaged, even in hard to reach areas.

The **paro[®]** S27 / M27 is recommended until the age of 6.

paro[®] baby

The **paro[®]** *baby* infant toothbrush has been specially developed for use from the first tooth. The compact brush head with rounded and extra-sensitive bristles is gum-friendly and allows parents an optimal and gentle post-cleaning of the teeth. The white bristle field indicates the pea size of the toothpaste to be used.

paro[®] special toothbrushes

paro[®] surgical

The **paro[®]** *surgical* is recommended for the targeted treatment of wounds after surgery because of the mega soft filaments.

paro[®] ortho brush child

The youth orthobrush, with a V-shaped cross section, is most effective for cleaning around braces, arch wires and other orthodontic appliances. A comfort grip provides increased control.

paro[®] superbrush

Cleans all three surfaces of the teeth simultaneously. Easy to use and proved to be very effective. Recommended where the coordination of right toothbrush movements are not given.

paro[®] clinic denture brush

For effective and careful cleaning of dentures. The extra head with stiff tapered filaments penetrates between teeth. The combination of hard and soft bristles in the main brush facilitate optimal cleaning efficiency. The specially shaped handle gives an extra comfort.
